

after line 3 and before the above heading, insert --

Brief Description of the Figures

Figures 1A - F show the effect of nasal application of 30 µg HC gp-39 on onset and progression of collagen type II induced arthritis in DBA/1 mice.

Figure 1A shows the effects on a clinical arthritis score in groups of mice

Figure 1B shows the effects on a clinical arthritis score in individual mice

Figure 1C shows the inhibition of histological alterations as evidenced by infiltrate score

Figure 1D shows the inhibition of histological alterations as evidenced by photographs of knee joints

Figure 1E shows the inhibition of radiological damage as evidenced by X-ray imaging

Figure 1F shows the inhibition of radiological damage as evidenced by photographs of ankle joints

Figure 2 shows the effect of nasal application of 3, 10 or 30 µg HC gp-39 on onset and progression of collagen type II induced arthritis in DBA/1 mice. The effects on a clinical arthritis in groups of mice are shown. --;
